Sudo

If the binary is allowed to run as superuser by `sudo`, it does not drop the elevated privileges and may be used to access the file system, escalate or maintain privileged access.

```
LFILE=file_to_read  
sudo cat "$LFILE"
```

based on the way the first flag was named I took a stab at it:

```
john@who-r-u:~$ sudo cat /root/root.txt  
<REDACTED>
```
